## 3 General

Jotron manufactures safety products designed for the search and rescue of human lives and property. For this product to be effective according to the design parameters, it is imperative that it is handled, maintained, serviced and stowed in accordance with this manual.

All information contained within this manual has been verified and is to Jotron's knowledge correct. Jotron reserves the right to make changes to any product(s) or module(s) described herein to improve design, function or reliability, without further notice.

Jotron is not liable and cannot be held responsible for any injury or damages caused directly or indirectly by an error or omission of information, incorrect or misuse, breach of procedures or failure of any specific component or part of this product.

Jotron documentation can be downloaded from jotron.com.

## 4 Standards

Jotron declares that this radio is compliant with Directive 2014/53/EU.

A copy of the declaration of conformity can be downloaded from Jotron.com.

The Tron TR30 (GMDSS – emergency mode) has been verified, tested and meets the following product standards:

| Maritime navigation and radio             |
|---|
| communication equipment and systems       |
| - General requirements - Methods of       |
| testing and required test results         |
| Electromagnetic compatibility and         |
| Radio spectrum Matters (ERM);             |
| Technical characteristics and methods     |
| of measurement for survival craft         |
| portable VHF radiotelephone apparatus     |
| Electromagnetic compatibility and         |
| Radio spectrum Matters (ERM);             |

#### Table 2 VHF mode - product standards

The use of Tron TR30 radio with the rechargeable LiPo battery may be subject to an operator certificate in accordance with RED 2014/52/EU, Article 10.10. Prior to using this equipment, please check with your local national radio license authority.

| 47 CFR 2.1093: Oct. 2013 | Radio frequency radiation exposure      |  |
|--------------------------|---|--|
|                          | evaluation: portable devices            |  |
| 47 CFR 80 to End: Oct.   | Electronic Code of Federal regulations, |  |
| 2015                     | Title 47, Telecommunications            |  |

This device complies with the GMDSS provision of part 80 of the FCC rules.

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

This class 2 CE approved product is available for sale and purchase in the following countries: Brazil, Canada, Europe, Korea, Russia and the United States of America. The relevant CE marking of CEO168! Is found on the product and the packaging.

All statements of conformity are available at jotron.com.

The following instructions are in accordance with national and international regulations regarding obligations of any radio operator:

Table 3 National and international radio operator obligation regulations

## 5 Product description

The Tron TR30 is a ruggedly designed radio made for easy operation. It is a portable survival craft two-way VHF radio which is possible to operate using one hand, even when wearing gloves. The high contrast graphical display including integrated back lighting of the display and keys are very effective for visibility and usage in low light conditions.

It is also water, oil and sunlight resistant. This radio is compact in size with smooth edges to avoid damage to clothing or a raft. The highly visible orange housing is made from glass reinforced polycarbonate.

The Tron TR30 GMDSS (emergency mode) radio is waterproof down to 1 meter and floats in water, battery included. The radio is designed with a self-draining loudspeaker.

The Tron TR30 (GMDSS - emergency mode) radio includes the following components:

- Tron TR30 radio
- TR30 Emergency battery (orange)
- Antenna
- Belt clip
- Wrist strap

The Tron TR30 GMDSS Maritime VHF radio (regular mode) includes the following components:

- Tron TR30 radio
- TR30 Emergency battery (orange)
- TR30 Rechargeable battery (black)
- RCH-30 battery charger
- Antenna
- Belt clip
- Wrist strap

| 19       | Jack cover (external accessories connector)     |

Table 4 List of components – Tron TR30 radio

#### 6.2 Antenna

The antenna for the Tron TR30 is fitted with a standard SMA connector. You can also connect a remote antenna for a fixed application.

The Tron TR30 unit is not waterproof when the standard antenna is not attached or if the antenna is not assembled correctly.

### 6.3 Emergency battery

The emergency battery (orange) is a lithium metal battery.

Figure 4 Tron TR30 Emergency battery (orange)

This battery is specially designed for use in an emergency and cannot be recharged. Keep the emergency battery in the RCH-30 battery holder (battery storage bay).

The emergency batter is a single use item. You must replace the batter before the battery expiry date and/or if the protective seal on the battery is broken.

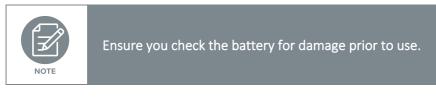

Always bring a sealed emergency battery with the radio when boarding a lifeboat or life raft.

## 6.4 Rechargeable battery

The Tron TR30 can also be delivered with a rechargeable lithium polymer battery (black). When using the rechargeable battery, additional functionality intended for regular radio usage is enabled. This battery can be recharged either while attached to the radio or while standing alone in the RCH-30 Battery charger.

Always use the Jotron RCH-30 battery charger to recharge this battery.

This battery must be charged prior to use. Charge a discharged battery within 1 week as the life of a battery diminishes greatly when stored in a discharged state.

## 6.5 Battery endurance

Below is a list of the operation times of the battery and usage.

Use medium or low power when possible, to maximize the operational time of the battery.

| Battery type         | Hours of usage*      |                      |
|----------------------|----------------------|----------------------|
|                      | Standby time (-20°C) | Multi-usage**(-20°C) |
| Emergency battery    | 70 hours             | 12 hours             |
| Rechargeable battery | 50 hours             | 12 hours             |

\*The hours indicated are based on 2W (tested at -20°C).
\*\* Emergency battery multi-usage hours have been tested in accordance with 10:10:80 ratio (Send:Listen:Standby).
\*\* Rechargeable battery multi-usage hours have been tested in accordance with 5:5:90 ratio (Send:Listen:Standby).
For more information refer to the ETS 33 225 standard.

## 6.6 RCH-30 battery charger

The RCH-30 battery charger can charge either a single rechargeable battery or a Tron TR30 with a rechargeable battery. In addition, this charger also has one extra batter storage bay for storing an emergency battery.

The charger will not charge a battery if the battery temperature is below 0°C or above 40°C, however, charging will automatically occur when the temperature is within the correct range.

The recommended charging temperature range is between  $+15^{\circ}C -+25^{\circ}C$ .

Figure 5 RCH-30 battery charger - side viewDoc. No.: 87095 Rev. Bjotron.com

Figure 6 RCH-30 battery charger - top view

Figure 7 Tron TR30 radio in the charging bay

Figure 8 Emergency battery in the storage bay

The battery charger is not waterproof and therefore must be protected from elements.

Leaving the radio switched on during charging will increase the charging time.

#### 6.6.1 RCH-30 battery charger components

An overview of the RCH-30 battery charger components.

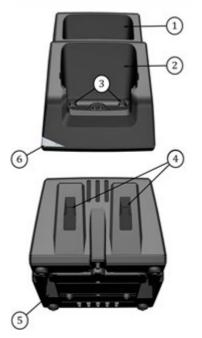

Figure 9 RCH-30 battery charger components

| ltem no. | Item                                     |
|----------|--|
| 1        | Battery storage bay                      |
| 2        | Battery charger bay                      |
| 3        | Vertical mounting holes (36mm spacing)   |
| 4        | Horizontal mounting holes (43mm spacing) |
| 5        | Power input                              |
| 6        | LED indicator                            |

Table 5 List of components - RCH-30 battery charger

#### 6.6.2 LED indicator

The LED indicator on the RCH-30 battery charger displays the current battery status.

| Indicator colour: | Status:                        | Colour: |
|-------------------|--------------------------------|---------|
| Green*            | The battery is fully charged   |         |
| Yellow            | The battery is charging        |         |
| Red               | There is a fault with charging |         |

\* A green light combined with a yellow blinking light also indicates the battery is fully charged.

## 7 Installation

Since the Tron TR30 can be supplied as a GMDSS or both a GMDSS and Maritime VHF radio and each radio uses a different battery, ensure you install the batteries appropriately.

Follow the applicable installation process according to the battery you will use, the emergency battery, the rechargeable battery or the test battery.

The emergency battery should only be installed on the in the event of an emergency.

## 7.1 Upon receipt of the radio

Upon receipt of the radio, do the following:

- 1. Mount the RCH-30 battery holder (refer to the RCH-30 battery holder mounting section)
- 2. Connect the antenna to the radio.

When assembling the antenna to the radio, ensure you hold it with two fingers at the base. Turn it clockwise. When the antenna starts to resist turning, turn it another ¼ turn (90 degrees). Holding the antenna anywhere but at the base during assembly will damage it.

3. Using the fixing track, attach the test battery onto the back of the Tron TR30 radio.

Do not force the battery. Ensure that you enter the bottom edge of the battery into the bottom edge of the radio.

4. Squeeze the black battery clips om either side of the battery to lock the battery into place.

### 7.2 Mounting the RCH-30 battery charger

The RCH-30 battery charger can be securely mounted on a flat surface in one of two ways:

- 1. Horizontal mounting
- 2. Vertical mounting

To mount the RCH-30 battery charger, do the following:

1. Use either the two horizontal or the two vertical mounting holes and screw the RCH-30 battery charger to the desired surface in an easily accessible area.

Place the radio in a location away from direct sea spray, chemicals, oil and vibration.

## 7.3 Installing the rechargeable battery

To install the rechargeable battery on the Tron TR30 (Maritime VHF) radio, do the following:

1. Using the fixing track, attach the rechargeable battery onto the back of the Tron TR30 radio.

- 2. Squeeze in the black battery clips on either side of the battery to lock the battery into place.
- 3. Insert the wall adapter cable into the power input located on the underside of the charger.
- 4. Plug in the wall adapter.
- 5. Insert the radio into the RCH-30 battery charger.

Do not force the radio into position in the charging bay.

6. Ensure that the radio is sitting properly in the RCH-30 battery charger.

## 7.4 Changing the rechargeable battery

Changing the battery must be done in a dry environment or under shelter as the radio is only waterproof when the battery, antenna and jack cover are correctly assembled.

To change the rechargeable battery on the Tron TR30 (Maritime VHF) radio, do the following:

1. Press the power button to turn off the radio.

- 2. Squeeze in the black battery clips in to release the battery.
- 3. Gently pull the top of the battery backwards and away from the radio.
- 4. Put the lower end of the new battery into the fixing track at the bottom of the radio.
- 5. Make sure the black battery clips are both fully engaged.

## 8 Operation instructions (GMDSS radio)

#### 8.1 In an emergency

Changing the battery must be done in a dry environment or under shelter as the radio is only waterproof when the battery, antenna and jack cover are correctly assembled.

To install the emergency battery on the Tron TR30 radio, do the following:

1. Pull back and remove the emergency seal sticker on the battery. Ripping the sticker off at the edge.

2. Using the fixing track, attach the emergency (GMDSS) battery onto the back of the Tron TR30 radio.

jotron.com

Do not force the battery. Ensure that you enter the bottom edge of the battery into the bottom edge of the radio.

3. Squeeze in the black battery clips on either side of the battery to lock the battery into place.

4. Press and hold the power button for approximately 3 seconds to turn the radio on.

#### 8.1.1 Replacing the emergency battery

If the emergency battery has expired or the battery has been used, it must be replaced with a new one. The emergency seal sticker must not be removed as only a sealed battery can be used in the case of an emergency. The battery and radio should always be stored together.

## 8.2 Emergency mode

When the emergency battery is connected, the radio automatically starts in the emergency mode. Only basic functionality is available to the user in this mode. This battery is for use in an emergency.

To use the radio in emergency mode, do the following:

- 1. Install the emergency battery.
- 2. Press and hold the power button for approximately 3 seconds to turn the radio on.

A circle (lifebuoy ring) appears in the top right corner of the display indicating it is in emergency mode. The radio loads the following settings: Channel 16, Max power level (2W), High volume and Low squelch

## 8.3 Channel selection

1. Press or press and hold the up or down arrow buttons to change the channel.

When an emergency battery is connected, only GMDSS channels are available.

For information regarding available and active VHF marine radio channels and frequencies, please refer to ITU standards, with reference to the current World Radio Conference (WRC) agreement. For an overview, refer to the Navigational Center website (www.navcen.uscg.gov - under Maritime Safety Information, Maritime Telecommunications).

## 8.4 Channel 16 button

1. Press the 16 button to jump directly to channel 16.

The transmit power will always be set to Hi power when using the channel 16 button.

## 8.5 Volume adjustment

1. Turn the volume control to adjust the volume.

jotron.com

The volume symbol in the display indicates the volume level. Ensure that you do not press down the volume control while adjusting the volume.

## 8.6 Squelch adjustment

Squelch adjustment. The squelch bar appears on the screen display indicating the current active sensitivity level. When the bar is adjusted fully to the left, the squelch is completely open. Adjusting the bar to the right lowers the receiver sensitivity. The signal strength of the current channel appears on the bar below the squelch bar. If the received signal is strong enough, the squelch opens and voice is received. This is indicated by the Rx symbol. When the squelch control is pressed twice, it opens the squelch immediately. Press twice to recall the previous squelch setting.

1. Press and turn the squelch control anti-clockwise to increase receiver sensitivity.

When the receiver signal is too distorted (by radio noise) to be readable, the loudspeaker or speaker mic is automatically muted. This is indicated by the Noise Cancel (NC) symbol that appears in the display.

### 8.7 Key lock and unlock

1. Press and hold the high/low button for 2 seconds to lock or unlock the buttons on the front.

A key symbol appears when the radio is locked. PTT, Channel 16, volume and squelch are still available when the radio is locked.

### 8.8 Watch

When the radio is in the emergency mode, it can only check for signals or watch in one way:

1. Dual watch

DW listens to the active channel and channel 16. The radio will continue to watch channel 16 while receiving on the other channels.

When you press PTT the radio will transmit on the active channel. In addition, the watch function will be deactivated.

#### 8.8.1 Dual watch

Dual watch (DW). The DW function allows the user to monitor channel 16 and the active channel alternately.

To active or deactive DW, do the following:

- 1. Press Scan to activate dual watch.
- 2. Press the up and down buttons to watch a second channel.

3. Press Scan a second time to deactivate dual watch.

#### 8.9 Menus

1. Press the up and down arrow buttons at the same time to enter or exit the menu system.

2. Use the up and down arrow buttons to navigate and select using Scan/Enter.

# 9 Operation instructions (Maritime VHF radio)

#### 9.1 Regular radio mode

When the rechargeable battery is connected, additional functionality is available. All VHF channels are available with triple watch and custom channel scan. In addition, three transmit power levels are also available.

1. Press and hold the power button for approximately 3 seconds to turn the radio on.

The radio loads settings based on the previous usage.

## 9.2 Channel selection

1. Press or press and hold the up and down arrow buttons to change the channel.

When a rechargeable battery is connected, all VHF maritime channels are available.

For information regarding available and active VHF marine radio channels and frequencies, please refer to ITU standards, with reference to the current World Radio Conference (WRC) agreement. For an overview, refer to the Navigational Center website (www.navcen.uscg.gov - under Maritime Information, Maritime Telecommunications).

## 9.3 Channel 16 button

1. Press the 16 button to jump directly to channel 16.

The transmit power will always be set to Hi power when using the channel 16 button.

## 9.4 Call channel

To program a call channel, do the following:

1. Press and hold the channel 16 button for 2 seconds to enter the call channel.

The radio will go to the programmed call channel. The default call channel is Channel 9.

2. Press and hold the channel 16 button again to change the call channel.

3. Press up and down arrow buttons to select the desired channel.

4. Press and hold mem set in for 2 seconds to save the channel.

The current value updates within approximately 2 seconds. The desired call channel is marked with a C that appears on the radio display.

5. Press the channel 16 button to close the menu.

To recall the desired channel, press the channel 16 button for 2 seconds. You can also press Scan to exit the programming mode.

## 9.5 Custom channels

In the regular radio mode, the Tron TR30 radio can store up to 20 custom channels, which must be programmed by a radio supplier.

To view the pre-programmed custom channels, select the Customer channel menu (Refer to the Menus section under the operation instructions for the maritime VHF radio).

All custom channels are identified by a letter followed by a number. The letters can be any of the following:

| Channel letter: | Channel ID: | Channel type:                        |
|-----------------|-------------|--------------------------------------|
| F               | "F"         | Fishing channel                      |
| L               | "L"         | Leisure channel                      |
| М               | "M"         | Yacht and leisure channels (UK only) |
| Р               | "P"         | Private channel                      |
| W               | "W"         | Weather channel                      |

#### 9.6 Volume adjustment

1. Turn the volume control to adjust the volume.

The volume symbol in the display indicates the volume level. Ensure that you do not press down the volume control while adjusting the volume.

## 9.7 Squelch adjustment

Squelch adjustment. The squelch bar appears on the screen display indicating the current active sensitivity level. When the bar is adjusted fully

Doc. No.: 87095 Rev. B

jotron.com

to the left, the squelch is completely open. Adjusting the bar to the right lowers the receiver sensitivity. The signal strength of the current channel appears on the bar below the squelch bar. If the received signal is strong enough, the squelch opens and voice is received. This is indicated by the Rx symbol. When the squelch control is pressed twice, it opens the squelch immediately. Press twice to recall the previous squelch setting.

1. Press and turn the squelch control anti-clockwise to increase receiver sensitivity.

When the receiver signal is too distorted (by radio noise) to be readable, the loudspeaker or speaker mic is automatically muted. This is indicated by the Noise Cancel (NC) symbol that appears in the display.

Figure 10 Noise cancel (NC) symbol on VHF screen (bottom right)

## 9.8 Key lock and unlock

1. Press and hold the high/low button for 2 seconds to lock or unlock the buttons on the front.

A key symbol appears when the radio is locked. PTT, volume and squelch are still available when the radio is locked.

## 9.9 Watch

When the radio is in the regular VHF mode, it can check for signals or watch in three ways:

- 1. Dual watch
- 2. Triple watch
- 3. Scan

The radio will continue to watch channel 16 while receiving on the other channels.

When you press PTT the radio will transmit on the active channel. In addition, the watch function you are currently in (DW, TW or Scan) will be deactivated.

#### 9.9.1 Dual watch

| Function:   | Display screen:  |
|---|------------------|
| Dual watch (DW). The DW function allows the user to     |                  |
| monitor channel 16 and the active channel               | AII INT 67<br>16 |
| alternately. The channel search indicator is visible on | a 🗛 👘            |
| the display; however, the channels do not appear in     |                  |
| real time.  | Hi 😜             |

To select DW setup, do the following:

1. Press the up and down arrow buttons at the same time to enter the menu.

- 2. Using the arrow button, select Settings.
- 3. Using the arrow button, select DW/TW.
- 4. Using the arrow button, select DW.
- 5. If the radio is not already set to DW, then select Save.

To activate or deactivate DW, do the following:

1. Press Scan to activate dual watch.

2. Press the up and down arrow buttons to watch a second channel.

3. Press Scan a second time to deactivate dual watch.

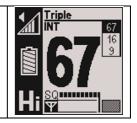

#### 9.9.2 Triple watch

Function:

Display screen:

Triple watch (TW). The TW function allows the user to monitor channel 16, the chosen call channel and the active channel alternately. The channel search indicator is visible on the display; however, the channels do not appear in real time.

To select TW setup, do the following:

1. Press the up and down arrow buttons at the same time to enter the menu.

- 2. Using the arrow button, select Settings.
- 3. Using the arrow button, select DW/TW.
- 4. Using the arrow button, select TW.
- 5. If the radio is not already set to TW, then select Save.

To activate or deactivate TW, do the following:

1. Press Scan to activate triple watch.

- 2. Press the buttons to watch a third channel.
- 3. Press Scan a second time to deactivate triple watch.

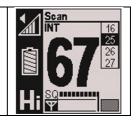

9.9.3 Scan

Function:

Display screen:

Scan. The scan function allows the radio to scan up to 12 memory channels (Channel 16 and the active channel are automatically included).

The radio is supplied without any pre-programmed channels, therefore, until a channel is added into the memory you will not have a channel available to scan. In this case, when you press Scan you will automatically go directly to the Scan Prog screen. All stored channels can be browsed by pressing the Mem button. Stored channels are displayed with an M.

To activate or deactivate Scan, do the following:

1. Press and hold Scan for 2 seconds to activate and short click to deactivate.

The scan indicator is visible on the display; however, the channels do not appear in real time.

#### 9.9.3.1 Scan prog

| Function:  | Display screen:   |
|--|---|
| Scan Prog.<br>You can store and delete memory channels for scanning<br>in two ways, do one of the following:<br>• Quick method, to be done when scan is<br>not active. | ScanProg<br>10 14 16<br>22 25 60<br>65<br>S0<br>S0<br>V |

| ٠ | Visual method, to be done when scan is |
|---|--|
|   | active.                                |

Quick method:

- 1. Navigate to the channel you want to store or delete from the memory.
- 2. Press and hold mem set for 2 seconds to store or delete the selected channel from memory.

Visual method:

1. Press and hold the Scan button for 2 seconds to activate Scan.

- 2. Press and hold the Scan button for 2 seconds again to enter the scan program screen.
- 3. Use the arrow buttons to select the desired channel.

4. Press and hold the mem set for 2 seconds to add or remove the current channel.

5. Press Scan to exit Scan Prog.

| NOTE |
|------|

The signal strength of the selected channel appears on the signal strength bar.

#### 9.10 Menus

1. Press the up and down arrow buttons at the same time to enter or exit the menu system.

2. Use the up and down arrow buttons to navigate and select using Scan/Enter.

Menus:

| Exit:   | Display screen:   |

#### 9.11 External accessories

| Function:            | Display screen: |
|----------------------|-----------------|
| External accessories |                 |

The headphone symbol appears in the display screen when you connect an external accessory, such as a headphone, microphone, or external PTT. It is also possible to choose the internal loudspeaker when using an external speaker mic.

Connector type: 3,5mm 4 pole jack.

When using an accessory, the radio will no longer be waterproof. The antenna and jack cover must be correctly assembled on the radio for it to be completely waterproof. Accessories should not be used when the Tron TR30 radio is in the emergency mode.

# 10 Maintenance

The following maintenance should be completed.

The Tron TR30 is a sealed waterproof radio and does not contain any user serviceable parts inside. This radio must never be opened by anyone other than an authorized Jotron agent. Unauthorized disassembly will void your warranty.

If the radio is immersed in seawater, rinse it promptly with fresh water. Wash away dirt and oil from the radio using warm water (no higher than 45°C) and mild dish soap. Finish by rinsing with fresh water and drying.

Only wash the exterior of the radio.

## 10.1 Regular inspection

The lifetime of any equipment depends on how well you take care of it. The Tron TR30 radio is constructed to endure in rough maritime environments. Regular inspection is important to detect error symptoms and prevent potentially serious problems.

To inspect, do the following:

- 1. Inspect the battery connection pins, the gasket and the lock/release mechanism.
- 2. Inspect the housing for defects regularly. Defects can affect water sealing.
- 3. Verify that the antenna and jack cover are assembled correctly, if not the radio will not be waterproof.

## **10.2** Regular testing

It is important to perform regular testing of equipment to ensure proper operation. This also ensures the radio is in good working order and therefore, ready for use in a potential an emergency.

Ensure you have a test battery available for use during testing to avoid using a sealed lithium battery. Testing should occur according to the requirements indicated in the onboard radio log.

To test, do the following:

- 1. Use the rechargeable battery or test battery.
- 2. Turn the radio on and choose an appropriate channel.

#### Do not use Channel 16.

- 3. Verify sending a transmission to another radio.
- 4. Verify receiving a transmission from another radio.
- 5. Turn off the radio.
- 6. Verify that the emergency battery is still valid.

The expiry date is located on the top of the battery.

7. Verify that the emergency battery is still sealed.

If the seal on the emergency battery is broken, replace the battery immediately.

## **11** Test and maintenance records

Below is an overview of all test and control details.

| Date | B/N/T* | Signature | Inspector name |
|------|--------|-----------|----------------|
|      |        |           |                |
|      |        |           |                |
|      |        |           |                |
|      |        |           |                |
|      |        |           |                |
|      |        |           |                |

## 12.4 Handling and storage

This product should be stored in a cool and well-ventilated area. Elevated temperatures can result in a reduction of battery life. Locations that handle large quantities of lithium batteries must ensure the batteries are isolated from combustibles. A short circuit for a few seconds will not seriously affect the battery. A prolonged short circuit will cause the battery to lose energy, generate significant heat and can cause the safety release vent to open. The contents of an open battery, including a vented battery, when exposed to water, may result in a fire and/or explosion. Crushed or damaged batteries may result in a fire. A battery that is disassembled or exposed to water, fire or high temperatures can explode or leak causing burns.

#### 12.4.1 Transportation

The product described in this manual is subject to follow special packing instructions and/or transportation regulations. Information regarding these regulations (in accordance with ICAO/IATA, IMDG code and/or ADR/RID) is included in the product safety information (PSI) and/or in the test summary report (TSR) (in accordance with UN test 38.3.5) and available for download at jotron.com - product.

## 14 Channels and frequencies

Regulations for the use of VHF radios varies from country to country. Check the national radio requirements for VHF radio operators and ensure this radio conforms to all the local regulations prior to use. The channel frequencies listed in this manual reflect only as they are available and displayed on the radio.

jotron.com

Due to the introduction of new services on frequencies that were previously used by maritime voice communications, you must refer to your local regulations to find out which channels you can use. These maritime frequency channel changes commenced 1<sup>st</sup> January 2017. This will be a gradual and ongoing process, with different regulations around the world. The new four-digit channel number format is not available on this radio.

Simplex use of the ship station (transmit side) of what was the international duplex channel is marked as "A" on the radio. The new channel format adds the number 10 in front of the channel (for example, channel 5A will be the same as channel 1005).

Simplex use of the coast station (transmit side) of what the international duplex channel is marked as "B" on the radio. The new channel format adds the number 20 in front of the channel (for example, channel 5B will be the same as 2005).

# 16 Optional accessories

For an overview of the available optional accessories for this product, refer to jotron.com.

# **17** Spare parts

For an overview of the available spare parts for this product, refer to jotron.com.

## **17.1** Counterfeit spare parts

Ensure that all spare parts being fitted to this product are only original spare parts manufactured or approved by Jotron.

Any use counterfeit parts will invalidate the product type-approval certificate.

# 18 Recycling and disposal

This product should not be disposed as normal waste and must be handled in accordance with the applicable federal, state and local waste disposal regulations in the country where the equipment is used.

## 19 Warranty

All Jotron products are warranted against factory defects in materials and/or workmanship during the warranty period.

Refer to the sales terms and conditions for specific warranty information regarding this product.

# 20 Service

All services such as testing, installation, programming, replacement, marking and battery exchange are provided by an authorized Jotron service agent.

Improper service or maintenance may destroy the functionality and/or performance of this product.

Jotron does not accept any responsibility for the dismantling or reassembling of any Jotron product that occurs externally from a Jotron authorized facility and/or is handled by someone other than an authorized, training and certified person.

#### 20.1 Service agents
