

JLN-650 Doppler current meter

– JRC's new 125 kHz Doppler current meter integrates a compelling combination of function and features

Unique twist mode (see display)

Up to 100 independent measuring layers

Four beam transducer for optimal performance

Automatic bottom current tracking

Dedicated keyboard

Japan Radio Co., Ltd.

Doppler current meter – performance features

Unique features

- The new JLN-650 Doppler current meter continues the tradition of enhanced acquisition of speed and tidal current data, but now with a newly designed transducer and the integration of an extensive range of function and features.

Twist display

You can view the current direction and speed in up to 100 layers with the twist mode. With this advanced feature, an operator is able to anticipate current speed and direction, enhancing the timing on when to deploy the nets in the water. Naturally, the twist display mode is accompanied with a wide range of information, such as current speed range, depth range, temperature and so on.

Bottom layer auto shift

The bottom layer (E) has the ability to automatically shift and display the measuring depth according to the ups and downs of the sea bottom. This is a great source of information for efficient fishing and for the safety of your nets.

Automatic bottom current tracking

Normally run automatically, the new JLN-650 allows bottom tracking with depths up to approximately 400 meters¹, measuring direction and speed relative to the sea bottom. If sea bottom becomes too deep, it automatically switches to water tracking mode or through GPS mode, depending on user selection.

Five depth layers

The JLN-650 Doppler current meter allows continuous display of tidal currents at five depths layers (A, B, C, D, E) simultaneously, of which each layer is measured in four directions: port ahead, starboard ahead, port astern and starboard astern. The user can select the depth of each layer, showing different information. You can also select bearing² displayed as North-up (with true north at the top of the display) and Head-up (with bow at the top of the display)

Fish finding

You can view fish echoes in four-directions, two-directions ahead, or in any one direction, allowing for easy fish tracking. Just as any typical fish finder, you can set the display to the type of fish or sea conditions simply by adjusting the sensitivity.

1. Maximum tracking depth may vary according to sea bottom conditions
2. Heading input necessary

Doppler current meter

– developed for maximum ease of use

Dedicated keyboard

The new JLN-650 allows you to carry out all operations simply by using the keyboard. The layout has a full complement of keys, including direct STC and GAIN, to adjust noise under surface of the water level and receiver sensitivity respectively. The keyboard also has one-touch menu keys to access different display modes instantly as well as a special  frame-selector to navigate quickly through a variety of menu items on display.

Easy interfacing

The new Doppler current meter integrates two-way interfacing, allowing you to easily connect a wide range of additional (NMEA) navigation equipment. Up to 1000 memory points of current and track data can be saved on USB memory.

Alarms

There are a wide range of alarms available on the JLN-650. With all alarms, for example, when depth becomes shallower than the parameter set, a warning message pops up, allowing the operator to take action, contributing to safer navigation and more efficient fish finding.

JRC StarNetwork™

JRC has been providing sales and support of products since 1915. Today, JRC offers comprehensive assistance through its organization, in partnership with a worldwide StarNetwork™ of over 270 fully trained and qualified partners and agents, assisting you 24 hours a day, 7 days a week and 365 days a year.

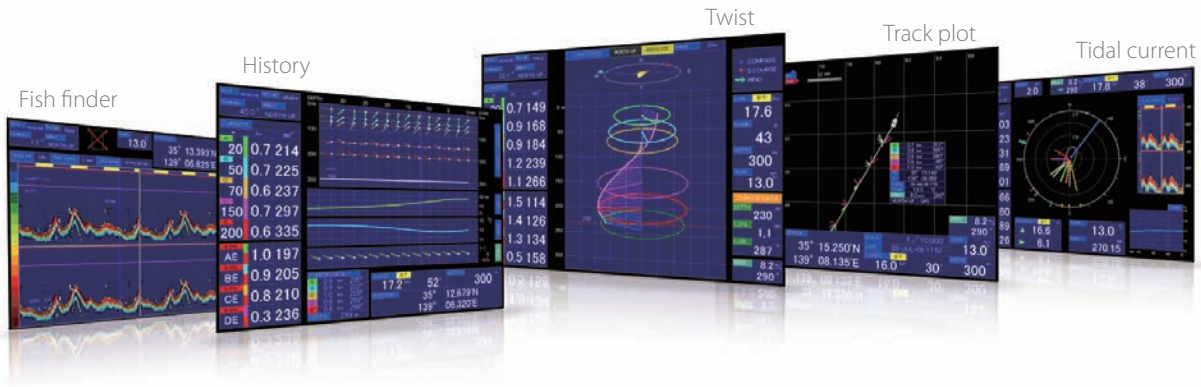

JRC one-call™
One number to call
With JRC you can go anywhere and if you need our support, simply call us at +81 3 3492 9201, anytime.

Doppler current meter – system flexibility

Display modes

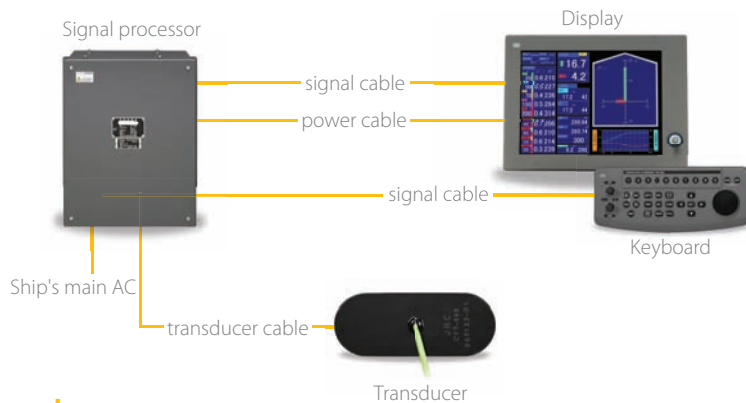

This Doppler current meter has 15 comprehensive and easily readable display modes for efficient tidal analysis. With our dedicated keyboard you can navigate through all common used tasks effortlessly.

Black box configured

The JLN-650 consist of a display, signal processor and keyboard, allowing for a flexible installation approach in confined spaces.

For those who prefer to specify their own display, the JLN-650 allows you to choose what type and size of display to connect to the unit. You can choose between LCD and CRT, as long as it supports XGA.

Transducer

JRC's new Doppler current meter operates with a new 125 kHz transducer, designed to minimize side lobes. The transducer is available with a stuffing tube, both for iron and FRP hull installations. The standard transducer cable length of 25 meters can be extended to a maximum of 100 meters. (special cable required)

What's included?

- 15-inch display¹
- Transducer
- Signal processor
- Keyboard
- Cables
- Spare parts
- Manual (English)

Cables included

- Signal cable 5m (processor to display)
- Power cable 5m (processor to display)
- Signal cable 5m (processor to keyboard)

1. Not included in black box configuration

Doppler current meter – dimensions and mass

Display (option)

NWZ-164 MASS 3,7 kg

cutout for flush mount height 265mm, width 371mm, depth 150mm **note** desktop bracket is optional

Signal processor

NJC-28 MASS 16 kg

note wall hanging possible

Keyboard

NCH-603E MASS 1 kg

cutout for flush mount height 88mm, width 272mm, depth 25mm **note** desktop mount is possible

Transducer

CFT-068A MASS 25 kg

stuffing tube iron hull MPJD30076, FRP hull MPJD30078 **note** attached 25 m cable, through hull fitting

Doppler current meter

– specifications

Model		JLN-650
General		
Measuring method	2-axis four beam pulse Doppler	
Frequency	125 kHz	
Screen	1024 by 768 pixels (XGA)	
Power supply	100V to 230V AC, 50Hz to 60Hz (single phase)	
Power consumption	< 270VA	
Current measurement performance		
Current speed range	0kn to 10kn	
Current measuring accuracy	maximum 2%rms or 0.2kn, whichever is greatest	
Current direction display	360° and numeric values with 32 bearing points	
Measurement layers	up to 100 layers (5 layers numerical)	
Minimum measurement depth of layer	8m (short pulse mode), 12m (normal pulse mode), 16m (long pulse mode)	
Maximum measurement depth of layer ¹⁾	160m (Tx power = standard), 200m (Tx power = high)	
Minimum measurement depth of bottom	26m (short pulse mode), 34m (normal pulse mode), 42m (long pulse mode)	
Setting depth range	5m to 500m	
Current reference	Doppler or GPS	
Measuring mode	relative or true	
Ship speed measurement performance		
Fore/aft range	–10kn to 40kn	
Port/starboard range	–10kn to 10kn	
Ground speed depth ²⁾	5m to 400m	
Measurement accuracy	± 1%rms or 0.1kn, whichever is greatest	
Water speed depth	more than 20m (ground and water speed simultaneous display)	
Distance run range	0nm to 99999.99nm	
Distance run accuracy	± 1%rms or 0.1kn	
Main performance		
Function	measuring current, ship speed, depth, fish finder, track plotting, graph display, profile display, self test, alarm function (current speed, ship speed, trip, timer, water temperature)	
Display modes	current, ship, plot, graph, fish, profile	
Numeric display	current speed, current indication (absolute 5 layers, relative 4 layers), measurement depth, bottom tracking ship speed/course, water tracking ship speed/course, ship position, heading, trip, date, FA ship speed/PS ship speed, trip or time value, water depth, water temperature	
Graphic display	absolute/relative current vector, ship speed vector, water temperature graph, current/depth graph, ship speed graph, wind speed, wind direction graph, trip display, fish display, profile display	
Interface		
NMEA input (v1.5 to 3.01)	bearing (HDT, VHW, HDM, HDG, THS), lat/long (RMC, GGA, GLL, VTG), water temp (MTW), wind direction (MWD, MWV)	
External trigger input	transmission trigger	
NMEA output (v1.5 to 3.01)	ship speed current (VDVBW, VDV LW, VDVHW, VDDBT, VDDPT, VDCUR, PJRCL)	
Distance output	4x log pulse (200 pulse/nm)	
JRC output	JRC format (for current data output)	
Memory data output	USB port (up to 1000 memory points of current and track data can be saved)	
Environment		
Operating temperature	–15° to 55°C	
Relative humidity	0% to 93% non-condensing	
Optionals		
Transducer with stuffing tube (iron tank)	NKF-775	
Transducer with stuffing tube	NKF-774	
Transducer element (125 kHz)	CFT-068A	
Stuffing tube (for iron hull)	MPJD30076	
Stuffing tube (for FRP)	MPJD30078	
Monitor mount kit for NWZ-164	MPBX42944	
Sun shade	MPOL30369	

1) Measurement depth is 80% or less of depth 2) Depths may vary according to sea (and sea bottom) conditions
